

# GREEN HEART PARK

## MUDEFORD WOOD

### 1 Native trees

New trees such as the rare Black Poplar and disease resistant Elm will provide food and cover for mammals, birds and insects and link to surrounding trees encouraging wildlife further into and through the space.

Somerford Road

### 2 Community Food Growing

A growing space near the community centre for fruit, vegetables and flowers. Come and learn how to grow or share your experience with others.

### 3 Blossom trees

A circle of blossom trees, such as wild cherry and crab apple, will make a natural meeting space. Birds will feast on the berries in the autumn.

Community Centre

Mudeford Woods has been chosen as one of our Green Heart Parks for its potential for biodiversity improvements and community growing which is a particular focus of the project.

Find out how to get involved and provide feedback on these ideas at:

<https://parksfoundation.org.uk/green-heart-parks/>

### 5 Benches

Take a seat and have a rest or join in a nature workshop or watch your friends performance. Benches in the blossom circle make a place for all this or just to listen to the robins.

Installed throughout the woods, these nesting boxes will help our local bats and birds thrive.

### 4 Bird & bat boxes

### 6 Carpets of flowers

A welcome splash of colour in Spring. Flowers provide an important source of nectar for insects early in the year and increase the bio-diversity in the woods.

### 7 Grassy meadows

Not only beautiful to look at, also great for bees, bugs and butterflies. Perennial flower meadows provide homes for our pollinators to feed and shelter in.
