

GREEN HEART PARK

Seafield Gardens

1 Wood stacks

Piles of deadwood make fantastic mini-ecosystems. Watch them evolve over time. The decaying wood supports a range of fungi and lichen.

2 A carpet of spring flowers

Under the trees, a colourful carpet of bluebells, anemones, clover and daffodils will provide an important source of nectar for insects early in the year.

3 Community Food Growing

A growing space for fruit, flowers, vegetables and herbs. Come and learn how to grow or bring your experience to share with others. Sessions led by Parks Foundation staff.

Helping nature thrive in our parks

Seafield Gardens has been chosen as one of our Green Heart Parks for its potential for biodiversity improvements and community growing which is a particular focus of the project.

Find out how to get involved and provide feedback on these ideas at:

<https://parksfoundation.org.uk/green-heart-parks/>

4 Wildflower meadow

Great for bees, bugs and butterflies! We will add perennial flowers to the meadow for returning flowers for our pollinators to feed and shelter in.

5 Orchard Trees

Fruit trees of all shapes and sizes, sharing shade, blossom and fruit for all.

6 New signage

New welcome signs, interpretation lectern and information panels will help new visitors explore and regular visitors keep up to date with exciting activities and happenings.
